

31. What is an Operator?

Answer: An operator is a symbol used to perform operations on values or variables.

Real-World Example: Like a calculator uses +, -, ×, and ÷ to perform calculations.

32. What are Arithmetic Operators?

Answer: Arithmetic operators are used to perform mathematical operations like addition, subtraction, multiplication, and division.

Real-World Example: Calculating the total cost of items while shopping.

33. What are Comparison Operators?

Answer: Comparison operators are used to compare two values and return True or False.

Real-World Example: Checking whether your exam marks are greater than the passing marks.

34. What are Logical Operators?

Answer: Logical operators are used to combine two or more conditions.

Real-World Example: You can enter an exam hall only if you have **an ID card AND a hall ticket**.

35. What is an if Statement?

Answer: An if statement is used to execute a block of code only when a condition is true.

Real-World Example: If it is raining, take an umbrella; otherwise, you don't need one.
