

16. What is Indexing?

Answer: Indexing is used to access an item using its position.

Real-World Example: Finding the first student in an attendance register.

17. What is Slicing?

Answer: Slicing is used to get a part of a string, list, or tuple.

Real-World Example: Taking only a few pages from a book to read.

18. What is a for loop?

Answer: A for loop repeats a block of code a fixed number of times.

Real-World Example: Calling every student's name one by one during attendance.

19. What is a while loop?

Answer: A while loop repeats a block of code until a condition becomes false.

Real-World Example: Keep filling a water bottle until it is full.

20. What is range()?

Answer: range() generates a sequence of numbers.

Real-World Example: Roll numbers from 1 to 30 in a classroom.
