

1. What is Python?

Answer: Python is an easy-to-learn programming language used to build websites, apps, AI, and automate tasks.

Real-World Example: Like using a calculator to solve maths quickly.

2. Why is Python popular?

Answer: Python is popular because it is simple, easy to read, and has many useful libraries.

Real-World Example: Like a smartphone that can do many different tasks.

3. What are the features of Python?

Answer: Python is easy, fast, free, portable, and supports object-oriented programming.

Real-World Example: Like a Swiss Army knife with many useful tools.

4. What is a Variable?

Answer: A variable is a name used to store data.

Real-World Example: Like a labeled water bottle.

5. What are Data Types?

Answer: Data types tell Python what kind of data is stored.

Real-World Example: School record stores name, age, and marks in different formats.
