

21. What is break?

Answer: break is used to stop a loop immediately.

Real-World Example: Stopping your bike when you reach your destination.

22. What is continue?

Answer: continue skips the current iteration and moves to the next one.

Real-World Example: Skipping an absent student while taking attendance.

23. What is a Function?

Answer: A function is a reusable block of code that performs a specific task.

Real-World Example: A TV remote button performs the same action every time you press it.

24. What is the difference between a Parameter and an Argument?

Answer: A parameter is a variable in a function, while an argument is the actual value passed to the function.

Real-World Example: A food recipe (parameter) and the actual ingredients you use (arguments).

25. What is the return statement?

Answer: The return statement sends a value back from a function.

Real-World Example: An ATM returns cash after processing your withdrawal.
